Advisory Council*

Why do we need healthy turfgrass? Well, it's not only aesthetically pleasing, but it is very good for the environment. Turfgrass purifies and conserves water. It helps prevent costly soil erosion and run off. It absorbs pollutants from the air and replaces them with oxygen while also increasing property value through curbside appeal. In this course we will learn about different variety choices, how to prepare the soil for best germination, learn how to read seed bags and fertilizer bags while learning about proper mowing and fertilizing, to insects, weeds and diseases and how these aspects all interrelate so you can take better of your lawn.

TO REGISTER: Mail your payment to: Lawn Care Class, 3309 Burlington Road, Greensboro, NC 27405. Make sure to indicate which class date you are registering for.
